Asset Owners Solutions with DataHub

Are you pension fund, insurance firm, or sovereign wealth fund, ready to implement a next generation data operating model at a fraction of the cost compared to legacy providers?

With in-depth knowledge across public and private markets, Fencore offers a cloud native, no-code data management solution with template-based integration to market standard order, portfolio and compliance management systems, market data vendors, custodians, external fund managers and service providers.

Fencore offers:

- ◆ Consistent, exception based and **fully automated data management** across structured and unstructured data.
- ◆ **ESG performance measurement and reporting:** Maintain your proprietary ESG scoring methodologies by importing multiple sources and scoring with your own methodology. Full audit trail and data lineage are part of the solution. Calculated scores can subsequently be used for performance measurement, risk, reporting or to create an ESG book-of-records.
- ◆ **Standardised workflows and operational procedures** across all data processes.
- ◆ Optional **out-sourced operational services** for specific elements of your operating model.
- ◆ Optional **reporting-as-a-service** for management, regulatory, and client reporting.
- ◆ **End-user training** for organisations who want to keep management, maintenance and refinement in-house, or a comprehensive suite of **managed or outsourced services** for those who prefer an outsourced operating model.

Ready to take your investment operations forward?

We're here as your consultants. Speak to us for a demo of what Fencore DataHub can do for you.
